

Oil drip trays are available as accessories to all TOOL-TEMP oil units.
Four different sizes are manufactured:

empty oil drip tray
(for unit model TT-388 / TT-390)

oil drip tray with unit TT-388 / TT-390

Oil drip tray to TT-248 / TT-288

Length: 1'210 mm
Width: 420 mm
Height: 190 mm
Weight: 26 kg

Special features:

The oil drip tray can be adjusted to the required size (TT-248 / TT-288). Therefore the right corner iron has to be moved.

Oil drip tray to TT-388 / TT-390

Length: 1'315 mm
Width: 545 mm
Height: 190 mm
Weight: 45 kg

Oil drip tray to TT-388/2 / TT-390/2

Length: 1'315 mm
Width: 785 mm
Height: 180 mm
Weight: 71 kg

Oil drip tray to TT-508

Length: 1'750 mm
Width: 1'000 mm
Height: 125 mm
Weight: 80 kg

To operate TOOL-TEMP oil units, drip trays are not necessary. The use of a drip tray can possibly be required due to local regulations.

The oil drip trays offer protection against eventual leaks at the unit or at the connections. The catching volume of the drip tray corresponds to the unit's content (according to the model) and offers therefore an optimal protection in case of any leak at the unit.

Handling

All drip trays are equipped with a drain tap. This makes the removal of an eventual oil content very easy and simplifies the cleaning work.

The construction of the drip tray makes it possible to transport and place it with a lift truck or with a fork lift truck. The unit itself can be very easily placed into the drip tray with the help of a fork lift truck.

General technical datas

Material: steel powder coated
Color: RAL 7001
Equipment: with drain tap
